Carports

Introduction To Carports

The Bighands carport is a lightweight, strong aluminium structure.

The roofing is made from polycarbonate. The single carport has a stylishly modern, curved cantilevered aluminium roof structure supported by two vertical columns.

A Bighands carport comes in a kit and will include all the components, as well as clear instructions so you can put it together in one weekend!

Of course, if you prefer, we can organise the installation by a trained professional for your convenience so we can take care of the entire process from installation to completion.

Double-Sided Cantilever Carport

Features of a Carport

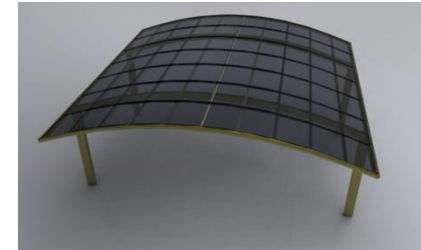

- A contemporary design offered in several colors to complement your home.
- Transparent polycarbonate roof allows sunlight in while offering UV protection to shelter your vehicle.
- The polycarbonate roof will reduce heat transmission by 50% and is fireproof.
- The carport is able to withstand winds of up to 100km/h, protect your vehicle from hail and carry snow up to a depth of 20cm.
- The powder coated aluminium frame makes Bighands carports resistant to corrosion.
- The streamlined design means the carport has a self cleaning mechanism.
- Guttering is built into the carport and down pipes can be quickly and easily attached.

Sizing and Options

The BigHands Carport comes in two options the single carport and the double carport.

Single Carport 5.5m (L) x 3.1m (W) x 2.6m (H)

Double Carport 5.5m (L) x 6.2m (W) x 2.6m (H)
